

## Stage Safety Line System

Tripline is a new safety product specifically designed for use on the front of performance stages. The system provides a discreet visual and physical barrier to the front line of the stage for both performers and stage crew.

The Tripline system provides a clear visual indication of the stage edge even in complete show blackout situations by means of a line of LED's positioned 30cm apart. This visual front line also has a failsafe backup in the application of a photoluminus strip which will glow in the dark for up to 8 hours without the need for an electrical power supply.

Made from Aluminium box section (25mm x 50mm) and available 1m, 2m and 3m lengths the unit can be mounted along the front line of a stage to provide a physical barrier in order to stop flightcases, stage trucks and tallescopes from rolling over and into the auditorium or pit areas. It can be fitted temporarily or permanently which makes it ideal for touring or for ever changing venues.

The top and rear of the Tripline unit can be specified in a number of different finishes to provide high grip, high visibility, photoluminescent or a discreet finish so that an audience is completely unaware that the Tripline unit is even in operation.

The colour of the LED's can be configured for multiple uses either to demarcate separate areas of the stage to help in choreography to ensure dancers hit their marks or they can line up on an unlit stage evenly. By using green LEDs you could simply show access points or stairways beyond the TripLine.

## Stage Safety Line System

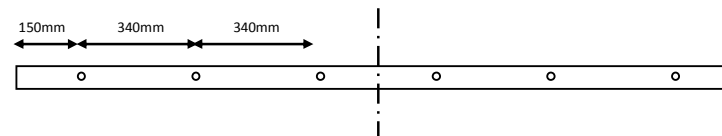

Developed from the growing need within the entertainment industry to comply with health and safety regulations. The TripLine system has been designed to meet all current EU regulations.

TripLine units are available in three standard sizes: 1m, 2m and 3m

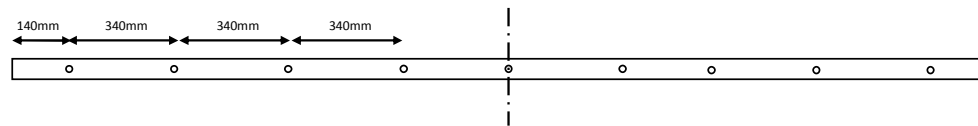

### 1m TripLine with 3 LEDs

### 2m TripLine with 6 LEDs

### 3m TripLine with 9 LEDs

### Standard Finish

Front: Red LED's & 19mm Photoluminus Tape

Top: 50mm Black Grip Tape

Back: 19mm Black PVC Tape

Underside: 50mm Black Velcro Loop Tape

The top, back and underside of the units can also be customised to suit individual needs.

### Fixing

The Velcro base makes temporary fixing quick and easy. In addition each TripLine unit is predrilled for permanent fixing with either screws or bolts.

### Dimensions

Standard TripLine Lengths 1m, 2m & 3m 1.5kg/m

TripLine Unit Controller 160mm x 168mm 1.2kg

### Options

The TripLine system can be fully customised from the external finishes to the colour of LED's or length of units, please ask for details.

Non LED versions are also available
